

## 2006–09 Civic Hybrid: New DTCs U0301, U0302, and U0312

Three DTCs have been added for 2006–09 Civic Hybrids. These DTCs are not yet listed in the service manual, and their descriptions are not in the HDS.

Here are the new DTCs (SAE and Honda codes), their SAE descriptions, and their causes:

SAE DTC (Honda DTC)	SAE Description	Cause
U0301 (195-1)	Software incompatibility with ECM/PCM	The PGM-FI software needs to be updated.
U0302 (195-2)	Software incompatibility with transmission control module	The CVT software needs to be updated.
U0312 (195-18)	Software incompatibility with battery energy control module A	The IMA battery software needs to be updated.

On 2006-09 Civic Hybrids, the latest software version for the PGM-FI, CVT, and IMA battery systems requires that all systems have the most recent software updates. Because of this, updating one system causes one or more other systems to set a DTC when you turn the ignition switch to LOCK (0) and then to ON (II). The DTC(s) cannot be cleared until all the systems are updated.

Update all systems as needed, turn the ignition switch to LOCK (0) and then to ON (II), then clear all DTCs with the HDS.
